

## Who we are

Air gap is a UK company which produce network security solutions.

## Air Gap Backup

The **Air Gap Backup** is a device that sits in between your network and back up devices. It automatically connects and disconnects your back up devices on a rotating schedule so that no more than one backup device is connected to your network at any time ensuring that your back up data stays safe.

Installed in minutes the easy to use and flexibility GUI allow you to be protected in minutes.

Backing up to up to 7 backup devices the flexible sequencer allows backups of your data when you require, physical air gaps in the Backup product keeps your data secure for when it is required in a way that pure software solutions cannot achieve.

This stops your data being encrypted or destroyed in the event of an attack on your network.

These products can be used to assist an organisation comply with NCSC recommendations and to achieve Cyber Essentials compliance.

## Key technical information

- 1 Input, 7 Output Ethernet
- Backup to up to 7 backup devices
- 1 and 10 G versions available
- 1U products for rack mounting or desk mounting

## APPLICATIONS

- ✓ Cyber Essentials
- ✓ Backup automation
- ✓ Ransomware attacks
- ✓ Disaster recovery

## WHY DOES YOUR BUSINESS NEED AN AIR GAP BACKUP?

Creating multiple backups across a range of backup devices the Air Gap Backup keeps your data safe and secure from hackers, ransomware attacks and accidental erasure.

The average remediation cost of a successful ransomware attack on U.K.

## KEY BENEFITS

- ✓ Installed and configured in minutes
- ✓ Disconnects backed up data from networks when not being used
- ✓ Stops backed up data being corrupted in event of ransomware attack
- ✓ Creates a level of security which software can't achieve
- ✓ Semiconductor switching
- ✓ Available in 1 and 10G bits/sec variants
- ✓ Core technology can be used to create products to meet specific requirements
