

Who we are

Air gap is a UK company which produce network security solutions.

Our products

- Air Gap Backup
- Air Gap Network Switch

Air Gap Backup is a device that sits in between your network and back up devices. It automatically connects and disconnects your back up devices on a rotating schedule so that no more than one backup device is connected to your network at any time ensuring that your back up data stays safe.

Air Gap Network Switch can be set up to automatically disconnect devices from computer networks when they are not in use. Its stops hackers' ability to steal data and inhibits viruses or other malware from entering a network. This product provides a clear desk policy for your network.

Our products are designed to provide flexibility through the simple GUI interface. Physical air gaps are the most comprehensive and effective method of inhibiting hackers' ability to achieve their aims.

These products can be used to assist an organisation comply with NCSC recommendations and to achieve Cyber Essentials compliance.

Key technical information

- 1 Input, 7 Output Ethernet
